DETAILED ACTION

Election/Restrictions

Claim 1 is allowable. The restriction requirement of species A and species B, as set forth in the Office action mailed on 5/13/2008, has been reconsidered in view of the allowability of claims to the elected invention pursuant to MPEP § 821.04(a). **The restriction requirement is hereby withdrawn as to any claim that requires all the limitations of an allowable claim.**

Claims 4, 9, and 10, directed to non-elected species are no longer withdrawn from consideration because the claim(s) requires all the limitations of an allowable claim.

In view of the above noted withdrawal of the restriction requirement, applicant is advised that if any claim presented in a continuation or divisional application is anticipated by, or includes all the limitations of, a claim that is allowable in the present application, such claim may be subject to provisional statutory and/or nonstatutory double patenting rejections over the claims of the instant application.

Once a restriction requirement is withdrawn, the provisions of 35 U.S.C. 121 are no longer applicable. See *In re Ziegler*, 443 F.2d 1211, 1215, 170 USPQ 129, 131-32 (CCPA 1971). See also MPEP § 804.01.

Allowable Subject Matter

Claims 1-10 are allowed.

The following is an examiner's statement of reasons for allowance:

Regarding independent claim 1, the prior art fails to teach or fairly suggest, in addition to the accompanying features of the claim, the following in italics:

Art Unit: 2883

A liquid crystal display device comprising: a first substrate; a second substrate being opposite to the first substrate; a first color filter formed on a first portion of the second substrate, the first portion corresponding to a first area of a display area, the first area being a border area of the display area;

a second color filter formed on a second portion of the second substrate, the second portion corresponding to a second area of the display area, the second area being the display area except the border area;

a first pixel electrode disposed in the first area;

a thin film transistor formed on the first substrate corresponding to the first area;

a first liquid crystal layer disposed between the first and the second substrate in the first area, and a zero electric field being formed on the first liquid crystal layer to completely transmit light; and

a second liquid crystal layer disposed between the first and the second substrate in the second area, wherein a gate electrode of the thin film transistor is connected to ground so that a data line is electrically disconnected from the first pixel electrode and the first area displays a predetermined color determined by the color filter.

Claims 2-10 are allowable by virtue of their dependency.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
